Music	Drama	History	
Photography	Health & Social Care	Catering	
	IT	Photography	
	Media Studies	Sport	
	Sociology	Travel & Tourism	
	Sport		

Tassomai - 2 Daily Goals per week Sparx - 4 tasks of Sparx per week

# **Year 11 - Homework Plan Subject**

Week/Date	Homework Task	Examination Question
Week 1 5th September	Cornell Notes on Nutrients	Answer the exam questions on :
		Describe the function of the 3 macronutrients with some food examples
Week 2 12th September	Revision Cards Nutrients	Answer the exam questions on:
		Choose a dish that has 2 high risk foods in it and write a timeplan.
Week 3 19th September	<b>Cornell Notes</b> Different life stages and nutritional needs	Answer the exam questions on:
		Design a menu for a life stage, highlighting the nutrients that are needed for that group
Week 4 26th September	Revision Cards Special Dietary needs	Answer the exam questions on
		Design a menu for a dietary need e.g vegan, highlighting the nutrients that are needed for that group
Week 5 3rd October	Cornell Notes Nutritional needs of different diets	Answer the exam questions on :
		Describe the most suitable cooking method/s to make chips for a person on a low fat diet
Week 6 10th October	Revision Cards Cooking methods	Answer the exam questions on
		Describe how boiling, roasting and frying affect the nutrients in food
Week 7 17th October	Cornell Notes on cooking methods and how they affect nutrients	Answer the exam questions on:
		Design a dish that uses at least 3 different cooking methods and write a timeplan for it

## Level 1/2 Hospitality and Catering: Unit 2-2.1.1 -

## Understanding the importance of nutrition

#### The importance of nutrition

Listed below are the macro-nutrients and micro-nutrients. You need to know their function in the body and know examples of food items for each. You need to know why they are needed in the diet and why there is a need for a balanced/varied diet.

#### Macro-nutrients

Carbohydrates - Carbohydrates are mainly used in the body for energy. There are two types of carbohydrates which are:

- Starch Examples include bread, pasta, rice, potatoes and cereals.
- Sugar Examples include sweets, cakes, biscuits & fizzy drinks.

Fat - This is needed to insulate the body, for energy, to protect bones and arteries from physical damage and provides fat soluble vitamins. There are two main types of fat which are:

- Saturated fat Examples include butter, lard, meat and cheese.
- Unsaturated fat Examples include avocados, plant oils such as sunflower oil, seeds and oily fish.

**Protein** - Protein is mainly used for growth and repair in the body and cell maintenance. There are two types of protein which are:

- High biological value (HBV) protein Includes meat, fish, poultry, eggs, milk, cheese, yogurt, soya and quinoa.
- Low biological value (LBV) protein Includes cereals, nuts, seeds and pulses.

#### Micro-nutrients

#### **Vitamins**

- Fat soluble vitamin A Main functions include keeping the skin healthy, helps vision in weak light
  and helps children grow. Examples include leafy vegetables, eggs, oily fish and orange/yellow
  fruits.
- Fat soluble vitamin D The main function of this micro-nutrient is to help the body absorb calcium during digestion. Examples include eggs, oily fish, fortified cereals and margarine.
- Water soluble vitamin B group Helps absorbs minerals in the body, release energy from nutrients and helps to create red blood cells. Examples include wholegrain foods, milk and eggs.
- Water soluble vitamin C Helps absorb iron in the body during digestion, supports the immune system and helps support connective tissue in the body which bind cells in the body together. Examples include citrus fruits, kiwi fruit, cabbage, broccoli, potatoes and liver.

#### **Minerals**

- Calcium Needed for strengthening teeth and bones. Examples include dairy products, soya and green leafy vegetables.
- Iron To make haemoglobin in red blood cells to carry oxygen around the body. Examples include nuts, beans, red meat and green leafy vegetables.
- Sodium Controls how much water is in the body and helps with the function of nerves and muscles. Examples include salt, processed foods and cured meats.
- Potassium Helps the heart muscle to work correctly and regulates the balance of fluid in the body. Examples include bananas, broccoli, parsnips, beans, nuts and fish.
- Magnesium Helps convert food into energy. Examples include wholemeal bread, nuts and spinach.
- Dietary fibre (NSP) Helps digestion and prevents constipation. Examples include wholegrain foods (wholemeal pasta, bread and cereals), brown rice, lentils, beans and pulses.
- Water Helps control temperature of the body, helps get rid of waste products from the body and prevents dehydration. Foods that contain water naturally include fruits and vegetables, milk and eggs.

## Level 1/2 Hospitality and Catering: Unit 2-2.1.1 -

Nutrition at different life stages & special dietary needs

#### Nutrition at different life-stages

#### Adults:

- Early Growth in regard to height of the body continues to develop until 21 years of age. Therefore, all micro-nutrients and macro-nutrients especially carbohydrates, protein, fats, vitamins, calcium and iron are needed for strength, to avoid diseases and to maintain being healthy.
- Middle The metabolic rate starts to slow down at this stage, and it is very easy to gain weight if the energy intake is unbalanced and there isn't enough physical activity.
- Elderly The body's systems start to slow down with age and a risk of blood pressure can increase as well as decrease in appetite, vision and long-term memory. Because of this, it is essential to keep the body strong and free from disease by continuing to eat a healthy, balanced diet.

#### Children:

- Babies All nutrients are essential and important in babies, especially protein as growth and development of the body is very quick at this stage. Vitamins and minerals are also important. You should try to limit the amount of salt and free sugars in the diet.
- Toddlers All nutrients remain very important in the diet at this stage as growth remains. A variety of foods are needed for toddlers to have all the micro-nutrients and macro-nutrients the body needs to develop.
- Teenagers The body grows at a fast pace at different times at this stage as the body develops from a child to an adult, therefore all nutrients are essential within proportions. Girls start their menstruation which can sometimes lead to anaemia due to not having enough iron in the body.

#### **Special Dietary needs**

#### Different energy requirements based on:

Lifestyles / Occupation / Age / Activity level
 The amount of energy the body needs is determined with each of the above factors e.g. active lifestyle or physical activity level would need more energy compared to a person being sedentary.

#### Medical conditions:

- Allergens Examples of food allergies include milk, eggs, nuts and seafood.
- Lactose intolerance Unable to digest lactose which is mainly found in milk and dairy products.
- Gluten intolerance Follows a gluten free diet and eats alternatives to food containing wheat, barley and rye.
- Diabetes (Type 2) High level of glucose in the blood, therefore changes include reducing the amount of fat, salt and sugar in the diet.
- Cardiovascular disorder Needing a balanced, healthy diet with low levels of salt, sugar and fat.
- Iron deficiency Needing to eat more dark green leafy vegetables, fortified cereals and dried fruit.

#### **Dietary requirements:**

- · Religious beliefs Different religions have different dietary requirements.
- Vegetarian Avoids eating meats and fish but does eat dairy products and protein alternatives such as quorn and tofu.
- **Vegan** Avoids all animal foods and products but can eat all plant-based foods and protein alternatives such as tofu and tempeh.
- Pescatarian Follows a vegetarian diet but does eat fish products and seafood.

temperature used in grilling foods.

How cooking methods can impact on nutritional value

Date	
Describe the function of the 3 macronutrients with some food examples	
Answer:-	

Date				
Choose a dish that has 2 high risk foods in it and write a timeplan.				
Answer:-				

Date
Design a menu for a life stage, highlighting the nutrients that are needed for that group
Answer:-

Date
Design a menu for a dietary need e.g vegan, highlighting the nutrients that are needed for that group
Answer:-

Date
Describe the most suitable cooking method/s to make chips for a person on a low fat diet
Answer:-

Date	\
Describe how boiling, roasting and frying affect the nutrients in food	
Answer:-	

Date
Design a dish that uses at least 3 different cooking methods and write a timeplan for it
Answer:-

STEP 2:		
CREATE		
CUES		
COES	STEP 1: RECORD YOUR NOTES	
What: Reduce your		
notes to just the essentials.	What: Record all keywords, ideas, important dates, people, places, diagrams	
What: Immediately	and formulas from the lesson. Create a new page for each topic discussed.	
after class,	When: During class lecture, discussion, or reading session.	
discussion, or	When burning class fecture, discussion, or reading session.	
reading session.	How:	
How:  Jot down key	Use bullet points, abbreviated phrases, and pictures     Avoid full sentences and paragraphs	
ideas, important	Leave space between points to add more information later	
words and	Why: Important ideas must be recorded in a way that is meaningful to you.	
<ul><li>phrases</li><li>Create questions</li></ul>	Triff important ladds mast be recorded in a way that to meaningful to you.	
that might		
appear on an exam		
<ul> <li>Reducing your</li> </ul>		
notes to the most important		
ideas and		
concepts improves recall.		
Creating		
questions that		
may appear on an exam gets		
you thinking		
about how the information		
might be applied		
and improves your		
performance on		
the exam.		
Why: Spend at least ten minutes		
every week		
reviewing all of your previous		
notes. Reflect on		
the material and ask yourself		
questions based		
on what you've		
recorded in the Cue area. Cover		
the note-taking		
area with a piece of paper. Can you		
answer them?		

# STEP 3: SUMMARISE & REVIEW

What: Summarise the main ideas from the lesson.
What: At the end of the class lecture, discussion, or reading session.
How: In complete sentences, write down the conclusions that can be made from the information in your notes.

Why: Summarising the information after it's learned improves long-term retention.

# **Revision Page**

# **Revision Page**

# **Revision Page**

#### **Revision Card on nutrients**

- 1. What are the 2 groups of nutrients and how are they different?
- 2. Which nutrient is needed for growth and repair?
- 3. What molecules are carbohydrates made of?
- 4. What are the two types of fat/lipids?
- 5. Which mineral is needed for healthy red blood cells?

#### **Answers**

# Revision Card on Nutritional needs of different groups based on age

- 1. Which nutrients should both children and adults try to reduce in their diet?
- 2. Why should adults especially try to limit the amount of saturated fat in their diets?
- 3. Why do teenage girls and women need more iron in their diet?
- 4. Which group has a quicker rate of growth?
- 5. Which mineral do children need to make sure they have as their bones and teeth are developing?

### **Answers**

# Revision Card on Special dietary needs

- 1. Which group of people consume no animal products and what could they use in a lasagna instead of meat?
- 2. What can't lactose intolerant people consume?
- 3. What could a coeliac replace pasta with in a lasagne?
- 4. Where should allergen information be found in a restaurant?
- 5. What nutrient would a bodybuilder need more of and why?

## **Answers**
