Triple Science
Travel and Tourism

Option C
Business Studies
Catering
Drama
Health & Social Care
Sport
Computer Science
Media
Photography
Sociology

### Half Term 5 (6 weeks) - Year 10

Week / Date	Homework task 1 Cornell Notes	Homework task 2 Exam Question
Week 1 15th April 2024	<b>Cornell Notes on:</b> different stages of play: unoccupied, solitary, onlooker/spectator, parallel, associative and cooperative.	<b>Question:</b> Explain two ways an early years practitioner can support a baby aged 12 months learn to walk.
Week 2 22nd April 2024	<b>Revision Cards on:</b> organisation of play	<b>Question:</b> Explain one reason why having the correct adult to child ratio is important when a child is outside
Week 3 29th April 2024	<b>Cornell Notes on:</b> different types of play: locomotor, creative, imaginative, creative, sensory, symbolic, technological and construction.	<b>Question:</b> State two ways that you could adapt a construction activity for a child with a short concentration span
Week 4 6th May 2024	<b>Revision Cards on:</b> adapting play for additional needs and making sure play is inclusive.	<b>Question:</b> State two hazards for a one year old child in an indoor nursery environment
Week 5 13th May 2024	<b>Cornell Notes on:</b> physical play, including which skills should be developed and examples of activities that can promote the use of these skills	<b>Question:</b> Explain two ways an Early Years Practitioner can support a baby aged eight months to learn to crawl
Week 6 20th May 2024	<b>Revision Cards on:</b> the role of the adult in play, including praise and rewards, promoting inclusivity and their role in language development.	<b>Question:</b> Explain one way promoting inclusion is important when someone is in a wheelchair

### Half Term 6 (7 weeks) - Year 10

Week / Date	Homework task 1 Cornell Notes	Homework task 2 Exam Question
Week 7 3rd June 2024	<b>Cornell Notes on:</b> social and emotional play 0-18 months and physical and intellectual play 18 months to 3 years, including skills which should be learned and activities which can be used to promote these skills	<b>Question:</b> State two reasons why a child may be shy around adults
Week 8 10th June 2024	<b>Revision Cards on:</b> adapting for physical and sensory needs.	<b>Question:</b> State two effects of a transition to an individual's social and emotional development
Week 9 17th June 2024	<b>Cornell Notes on:</b> language and social/emotional play for 18 months to 3 years and physical play 3 to 5 years, including skills which should be learned and activities which can be used to promote these skills	<b>Question:</b> Explain how disruptive behaviour can affect learning and development
Week 10 24th June 2024	<b>Mock Exams</b>	<b>Mock Exams</b>
Week 11 1st July 2024	<b>Mock Exams</b>	<b>Mock Exams</b>
Week 12 8th July 2024	<b>Cornell Notes on:</b> adapting activities to support cognitive needs	<b>Question:</b> State two benefits to children's development of risk taking play activities
Week 13 15th July 2024	<b>Revision Cards on:</b> Physical development (including fine and gross motor skills)	<b>Question:</b> Explain two reasons why the adult always carries out a risk assessment in the outside play area

**Year 10 Term 3 Knowledge Organiser Week 1-3 Child Development**

Week	Keywords	Other Information
1	<p><b>Unoccupied play</b> - a child does not interact with others and makes movements with their body</p> <p><b>Solitary play</b> - playing alone</p> <p><b>Social skills</b> - required to interact with people like sharing and turn taking.</p> <p><b>Spectator play</b> - watching others play.</p> <p><b>Parallel play</b> - playing alongside others</p> <p><b>Associative play</b> - sharing resources but playing alone.</p> <p><b>Cooperative play</b> - when children play together.</p>	<p>It is a human right for children for a child to play. Unoccupied play tends to happen in the first three months of life and is centred around large muscle movements. It will not look like play to adults but helps them learn how to control their body. Children also take part in solitary play, this may seem lonely but they are not actually interested in playing with others at this stage. This stage is purely about their own exploration of their environment.</p> <p>Onlooker and parallel play is where children start to show interest in others but still do not have necessary language and social skills to interact. Onlooker play (spectator play) helps children learn by watching others, whilst parallel play helps children to build trust and get used to others being in the same environment.</p> <p>From 3 years, children interact with others in play. In associative play this will involve sharing resources or playing the same game but in their own way. Children only begin to show playing together towards a common goal in cooperative play which begins at around 4 years old.</p>
2	<p><b>Specific Areas</b> - different areas in a setting that organises the play activities and resources.</p> <p><b>Explain</b> - Say how or why something happens; 'because' will be an important part of your answer.</p>	<p>Organisation of play areas is essential in an early years setting. This allows children to find things easily and tidied away easily too which can avoid trip hazards. The way this is organised should be age appropriate, for younger children this may include using pictures as for a labelling system and for all ages drawers and cupboards should be height appropriate. One way of organising is to divide the space into separate areas for example messy area, story area, or role play corner.</p>
3	<p><b>Locomotor play</b> - play with a physical activity</p> <p><b>Creative play</b> - freedom to explore resources</p> <p><b>Sensory Play</b> - use of senses to explore</p> <p><b>Imaginative play</b> - when a child is pretending in some way</p> <p><b>Symbolic play</b> - using objects as different things</p> <p><b>Technological play</b> - use of IT equipment.</p> <p><b>Construction play</b> - building things</p>	<p>Early years practitioners should be aware of the types of play that should be offered to children. This is so they can plan activities and ensure there are enough resources to support the different types of play. Sometimes the play might be directed by the child as they find their own resources, for example a child may go playing outside and pick up a stick to use it as a wand or sword, this shows both imaginative play as they are pretending to be wizards or knights, as well as symbolic play as the stick is being used to represent something else. For other types of play, an adult might encourage children to take part in a set activity, for example junk modelling can be used to encourage construction play, whilst scented playdough could help sensory play.</p>

**Year 10 Term 3 Knowledge Organiser Week 4-6 Child Development**

Keywords	Other Information
<p><b>Inclusive</b> - including everyone  <b>Right to learn</b> - a moral and legal entitlement to have an education and learn.  <b>Desired behaviour</b> - the way in which we want children to behave.  <b>Additional needs</b> - indicate that a child may need extra support to help them participate.</p>	<p>Play should be adapted to promote an inclusive learning environment. This is important as every child has the right to learn as decided by The <b>United Nations convention on the Rights of the Child</b>. This means there is a legal responsibility to ensure every child learns and play should be adapted for individual circumstances. To do this, each of the five areas of development should be promoted equally.                      The role of the adult, therefore, is to promote inclusion by modelling desirable behaviour, interacting with children with additional needs and giving children a choice when planning activities. Inclusion means everyone is involved regardless of ethnicity, religion, language, gender or disability.</p>
<p><b>Hand-eye coordination</b> -coordinated control of eye movements with hand movements.  <b>Spatial awareness</b> - understanding where you are in relation to the objects in your environment.  <b>Imagination</b> - using your mind to be creative  <b>Attention skills</b> - noticing and concentrating on something.</p>	<p>Physical play should consider development of hand-eye coordination, spatial awareness and motor skills. For 0-18 months, rolling a ball can help spatial awareness, coordination and gross motor skills. Cognitive play should be designed to help with their problem solving, imagination and creativity, listening and attention skills, numeracy skills, exploration of environments, and boost confidence with technology. For 0-18 months, a shape sorter could be used to help problem solving skills.                      Language and communication play involves listening to others, vocabulary and literacy skills, expressing feelings and understanding others. For 0-18 months, different books can be used. Lift-the-flap books help develop new vocabulary whilst being engaging; stories with puppets could be used to help children understand the feelings of the characters, which helps to identify their own feelings.</p>
<p><b>Praise</b> - expression of approval  <b>Reward</b> - given in recognition of effort or achievement  <b>Communication methods</b> - different ways in which we can communicate with each other, for example different languages, sign language, non-verbal communication.</p>	<p>Part of the role of the adult in play and learning is to respond positively to them, this could include the use of praise and rewards. This helps develop a child’s confidence and self-esteem, as well as encouraging children to repeat desired behaviours. The adult should also recognise any signs of boredom in the child as this can lead to loss of concentration. If a child is bored, the adult should respond by adapting the activity.                      Promoting inclusivity is beneficial to all children, not just those with additional needs. This is because it promotes positive behaviour and makes children more responsive and adaptable to differences.</p>

**Year 10 Term 3 Knowledge Organiser Week 7-9 Child Development**

Keywords	Other Information
<p><b>Interaction</b> - involvement with others  <b>Social bonds</b> - attachment to other people  <b>Emotional bonds</b> - having a connection with a person.  <b>Spatial awareness</b> - knowing where you are in relation to objects around you.</p>	<p>Social and emotional play is based around developing relationships, social skills, and promoting self-confidence, self esteem, self-awareness and independence. For 0-18 months, singing together can help them form relationships with others and choosing the song would help promote independence and self-esteem.</p> <p>Physical play is centred around spatial awareness, staying healthy and looking after yourself, and fine and gross motor skills. For 18 months to 3 years helping to prepare food helps children understand their diet and how to eat healthily, as well as practising fine motor skills.</p> <p>Intellectual play focuses on problem solving, imagination and creativity, listening and attention skills, and numeracy. Singing a song like “five monkeys on a bed” helps the children count as well as pay attention to what number is coming next.</p>
<p><b>Grasping</b> - movement of grabbing something by closing fingers around it.  <b>Visibility</b> - state of being able to see or be seen.  <b>Sensory needs</b> - difficulty seeing or hearing.  <b>Contrasting colour scheme</b> - using two opposite colours to help visibility.</p>	<p>To help children with physical needs, space should be considered. There needs to be enough space for the child to move around freely, accommodating for the use of a mobility aid where necessary; this could involve rearranging furniture. Lighting is important for children with physical needs and visual impairment, children need to be able to see to move around. This could include increasing light levels and making use of contrasting colours so furniture stands out against the background to make it easier to avoid. The level of activity may need to be considered. A table may need lowering for a child in a wheelchair or putting activities on the floor if that is where the child is more comfortable.</p>
<p><b>Listening walk</b> - being silent whilst walking to listen to what is happening around you.  <b>Emotion face</b> - showing different emotions on your face to help children recognise different expressions.</p>	<p>Language play can often involve books as this can help with listening skills, new vocabulary and literacy skills, helping them to identify feelings as well as understanding different experiences of others.</p> <p>By 18-3 years, children will start to show interest in others. This helps them to develop friendships and relationships and if they play associatively, will help practice their social skills.</p> <p>By 3-5 years old, children will have developed better body coordination. This means that they will be ready for bat-and-ball activities which practise both hand-eye coordination but also balance, and gross motor skills. This can also link to how to stay healthy as they could talk about exercise.</p>

**Year 10 Term 3 Knowledge Organiser Week 9-13 Child Development**

Keywords	Other Information
<p><b>Restricted motor skills</b> - when a child is unable to control their muscle movements as well as other children their age.</p> <p><b>Delayed motor skills</b> - when a child's motor skills are not progressing as quickly as others their age.</p>	<p>A child with a <b>disability or medical issue</b> could have restricted fine or gross motor skills. This is not the same as them being delayed - this is where the child is not making progress at the same rate, rather than being unable.</p> <p>Physical circumstances can affect emotional and social development as the child may recognise they are different and lack self-esteem and confidence. This could then affect their ability to make friends.</p>
<p><b>Imagination</b> - using your mind to be creative</p> <p><b>Attention skills</b> - noticing and concentrating on something.</p> <p><b>Literacy</b> - reading and writing skills</p> <p><b>Communication</b> - passing of information between two or more people</p>	<p>By 3-5 years old, children have developed good problem solving skills and have a long enough attention span to really enjoy trips and days out like going to the zoo. They also have developed some numeracy skills but using wipe boards could help develop these further.</p> <p>For 3-5 years, speech and vocabulary is quickly developing. Using nursery rhymes can help children with the correct pronunciation of words. They can continue to understand others by learning about different religious festivals and cultures.</p>
<p><b>Attention span</b> - the amount of time a person can concentrate.</p> <p><b>Modify</b> - make changes to something</p> <p><b>Overwhelming</b> - very intense or hard to deal with.</p>	<p>For cognitive and language/communication needs, activities can be adapted in various ways. The length of the activity can be shortened so children stay engaged for the entire activity. One way this could be achieved is by breaking activities down into small steps which are more achievable for the attention span of the child.</p> <p>For other individual needs, activities may be adapted to become less overwhelming. This can be achieved by removing the number of parts or removing some choice - for example letting them choose from two activities not three.</p>
<p><b>Adult-led play</b> - where an adults plans, organises and leads an activity</p> <p><b>Adult-initiated</b> - adults provide resources for an activity but let children play with them in the way that they choose.</p>	<p>Associative and cooperative play are common between the ages of 3 and 5 years old and show that children have developed friendships. To further practise social skills, children can play board games. To help children express their feelings effectively, circle time may be used to encourage children to talk about their day.</p> <p>Adult-led play benefits children as it allows them to take part in high risk activities, like going to a play park, as well as helping develop their vocabulary. The time given by the adult for adult-led play may be limited which means learning could be limited by lack of repetition.</p> <p>Adult-initiated play is beneficial as children may learn to play in new ways as they are free to explore, and it promotes independent learning. The issue is that the child may not learn the intended skill, which would not happen in adult-led play.</p>

## STEP 2: CREATE CUES

**What:** Reduce your notes to just the essentials.

**What:** Immediately after class, discussion, or reading session.

**How:**

- Jot down key ideas, important words and phrases
- Create questions that might appear on an exam
- Reducing your notes to the most important ideas and concepts improves recall. Creating questions that may appear on an exam gets you thinking about how the information might be applied and improves your performance on the exam.

**Why:** Spend at least ten minutes every week reviewing all of your previous notes. Reflect on the material and ask yourself questions based on what you've recorded in the Cue area. Cover the note-taking area with a piece of paper. Can you answer them?

## STEP 1: RECORD YOUR NOTES

**What:** Record all keywords, ideas, important dates, people, places, diagrams and formulas from the lesson. Create a new page for each topic discussed.

**When:** During class lecture, discussion, or reading session.

**How:**

- Use bullet points, abbreviated phrases, and pictures
- Avoid full sentences and paragraphs
- Leave space between points to add more information later

**Why:** Important ideas must be recorded in a way that is meaningful to you.

## STEP 3: SUMMARISE & REVIEW

**What:** Summarise the main ideas from the lesson.

**What:** At the end of the class lecture, discussion, or reading session.

**How:** In complete sentences, write down the conclusions that can be made from the information in your notes.

**Why:** Summarising the information after it's learned improves long-term retention.

# WEEK 1: Cornell Notes (Homework task 1)

<b>Date:</b> 15th April 2024	<b>Topic:</b> different stages of play: unoccupied, solitary, onlooker/spectator, parallel, associative and cooperative.	Revision guide page:
------------------------------	--	----------------------

<b>Links</b>	<b>Notes</b>
<b>Questions</b>	

**Summary**

## WEEK 1: Exam Question (Homework task 2)

Date: 15th April 2024

**Question:** Explain two ways an early years practitioner can support a baby aged 12 months learn to walk.

Answer:

---

---

---

---

---

---

---

---

---

---

## WEEK 1: Exam Question review and improvement (Classwork)

**Question:** Explain two ways an early years practitioner can support a baby aged 12 months learn to walk.

Answer:

---

---

---

---

---

---

---

---

## WEEK 2: Exam Question (Homework task 2)

Date: 22nd April 2024

**Question:** Explain one reason why having the correct adult to child ratio is important when a child is outside

Answer:

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Week 2

Revision Card on	Answers
<ol style="list-style-type: none"><li>1. Give three examples of separate areas a nursery could split a room into.</li><li>2. Why is organising play areas important?</li><li>3. How can labelling of resources be adapted for younger children?</li><li>4. Give another adaptation to drawers and cupboards for younger children</li><li>5. How does organising play areas help development?</li></ol>	

## Week 4

Revision Card on	Answers
<ol style="list-style-type: none"><li>1. What does the term inclusive mean?</li><li>2. What is meant by the term right to learn?</li><li>3. Who decided that children have the right to learn?</li><li>4. Should one area of development be prioritised over the others?</li><li>5. State a characteristic which could cause a child to be discriminated against.</li></ol>	

## Week 6

Revision Card on	Answers
<ol style="list-style-type: none"><li>1. State a benefit of promoting inclusivity.</li><li>2. Why should an adult use praise and rewards during play?</li><li>3. Define the term communication methods</li><li>4. How should an adult respond to boredom?</li><li>5. Define the term reward.</li></ol>	

## Week 8

Revision Card on	Answers
<ol style="list-style-type: none"><li>1. Define the term grasping</li><li>2. Give an example of a sensory need</li><li>3. How can space be changed to accommodate a mobility aid?</li><li>4. How can a contrasting colour scheme help people with a visual impairment?</li><li>5. How might the level of the activity need changing for a child?</li></ol>	

## Week 13

Revision Card on	Answers
<ol style="list-style-type: none"><li>1. Give an example of fine motor skills</li><li>2. How would delayed fine motor skills affect language development?</li><li>3. What is the difference between restricted and delayed motor skills?</li><li>4. What could cause restricted motor skills?</li><li>5. How can physical circumstances affect emotional development?</li></ol>
